

Comparing with Asian mould structure, the European structure is very different and complicated, including the setup of FIBRO Spring system, Guide pillar and bushing, and FESTO Cylinder system etc, which can't be founded replaced by PUNCH, MISUMI from Japan. That mean, we need to directly purchase them from Germany within urgent time.

FIBRO Guide pillar, bushing and Spring system:

DANLY system is customized in DANLY headquarter in America.

On 20th Oct, by present of German customer, the mould testing and sample inspection are audit approved and obtain release for delivery on next day.

Among the building process, this mould test the engineering, manufacturing, inspecting and purchasing department of Hiparter, and accumulate the knowledge of every Hiparter member,

and finally delivery mould in higher level and higher quality.
