Good news: Another transfer die made by us exported to India Mar.17th, 2012.

Transfer die is a kind of stamping dies which will operate with manipulator. It is used to manufacture some products, which are not suitable to make progressive dies. But we want to improve the efficiency.

After we finished the transfer die, the engineers of quality department from Mitsubishi come to our factory to inspect the die trial sample. (Using our inspection equipment: Coordinate Measurement Machine, Vision Projector Measurement Machine etc.)
