Sept.13th, 2011, our customers from Indonesia came to our factory for a visit. We had a meeting for customer' new project—Stamping Dies for Rice Cooker.

Our engineers show customers the die structure drawings, in order to make them understand our idea clearly. Everything goes well. And we began to make stamping dies according to detailed die structure.

After customers confirming the samples, we exported stamping dies to Indonesia.

Now, the rice cooker stamping dies are working in Indonesia for batch production.
